

Position as a Bioinformatician at TIGEM-Bioinformatics Core.

We are looking for a bioinformatician to work in the Bioinformatics Core of the Telethon Institute of Genetics and Medicine (TIGEM) in Naples.

Currently, the Bioinformatics Core develops and applies methods for statistical data mining, exploratory data analysis, and in general bioinformatics tools, to solve research problems of the different research groups at TIGEM.

The Core also collaborates with research groups in specific research projects for the development of novel bioinformatics and computational biology tools.

As a member of the Bioinformatics Core team, you will mainly be responsible for sequence analysis and databases development and maintenance.

Essential requirements are: programming skills in Perl and SQL/mySQL. Knowledge of genome databases (Ensembl, UCSC Genome Browser). Knowledge of molecular biology.

Preferential requirements are: experience in systems administration, programming skills in Java and Matlab; knowledge of probability and statistics; knowledge of the English language.

The position is for one year, renewable, starting in September 2008.

Salary will be assigned based on experience, according to the TIGEM salary system.

Deadline for applications is 15 June 2008.

Please include a full CV, a motivation letter, and 2-3 references, and send them Diego di Bernardo (dibernardo@tigem.it) and Luisa Cuttillo (cuttillo@tigem.it). These documents can be sent also in Italian. For more information please write to cuttillo@tigem.it.
